

# Edwards Fogarty<sup>®</sup> Catheters

The only name in clot  
management backed  
by over 50 years of  
worldwide experience.

Edwards

# For over 50 years, clinicians have come to address the real problem of clot

The reason is simple. Through collaboration and clinical learning, Edwards Lifesciences has continued to evolve and advance its Fogarty® catheters to meet the exacting needs of specialists for vascular procedures. Their proven performance and manufacturing quality has led surgeons to specify genuine Fogarty® catheters – available exclusively from Edwards – for millions of procedures worldwide.

## Fresh, soft emboli/thrombi

### **Fogarty® arterial embolectomy catheter**

Removal of fresh, soft emboli and thrombi from vessels in the arteries of the non-central circulatory system

- Hand-tied using a recessed winding technique to secure balloon to catheter
- Balloon exhibits a symmetry that exerts uniform contact with vessel walls for even pressure and precise traction
- Rounded tip promotes easy insertion for reduced trauma

### **Fogarty® Fortis arterial embolectomy catheter**

Removal of fresh, soft emboli and thrombi from vessels in the arteries of the non-central circulatory system

- Can withstand greater pull-force than the Fogarty® arterial embolectomy catheter
- The addition of barium to the catheter tubing provides radiopacity

## Fresh, soft emboli/thrombi, temporary occlusion, infusion

### **Fogarty® thru-lumen embolectomy catheter**

Multi-use guidewire-compatible design enables removal of fresh, soft emboli and thrombi from vessels in the arterial system as well as temporary occlusion of blood vessels, infusion of fluids, and blood sampling

- Fogarty® balloon conforms to the vessel to maximize clot removal while minimizing trauma
- Provides the solution for distal thrombus removal in the arterial system
- The addition of barium to the catheter shaft material and stainless steel markers proximal and distal to the balloon provide radiopacity\*

\*3F Thru-Lumen embolectomy catheter body does not include barium

# nted on real Fogarty® catheters management.

## Mature, adherent thrombi

### Fogarty® Corkscrew catheter

Indicated for removal of emboli and thrombi from either native vessels or synthetic grafts in the arterial system

- For extracting thrombus that is too resistant for an elastomeric balloon
- Corkscrew design increases the surface area for entrapping fibrous material
- Radiopaque and flexible

### Fogarty® graft thrombectomy catheter

Designed for removing organized thrombus and adherent thrombotic material from synthetic bypass grafts, specifically, AV fistulas for dialysis access and grafts for iliofemoral bypass

- For thrombus that is too resistant for an elastomeric balloon
- Provides a larger diameter range than the Fogarty® Corkscrew catheter
- The pulling force can be varied by adjusting the diameter

## Venous thrombi

### Fogarty® venous thrombectomy catheter

Designed for removing thrombi in the venous system

- The long, soft tip permits advancement past the venous valves without undue trauma

## You'll want a real

A close-up of the Fogarty catheter tip, which is a white, conical, flexible device with the brand name "Fogarty®" printed on it.

**Fogarty®**
